1. Start with a Problem Statement:

- **Example from the Original:** The problem was about fatigue and microsleep causing road accidents.

- **For "Alnonte":** Begin by explaining the challenges students face in accessing high-quality notes. For example:

  o "Students often struggle to find reliable and well-organized notes to supplement their studies. Traditional methods of sharing notes are inefficient, leading to limited access to quality materials."

2. Explain the Importance and Context:

- **Example from the Original:** Mention of research studies, statistics on road accidents, and the role of fatigue.

- **For "Alnonte":** Discuss the importance of having a reliable platform where students can access and share notes:

  o "In the digital age, having access to a centralized platform for academic resources is crucial. Despite the availability of various study materials, students often find it difficult to locate, purchase, or share notes effectively. This is where 'Alnonte' comes in."

3. Describe Your Solution:

- **Example from the Original:** Development of a drowsiness detection system using OpenCV and deep learning.

- **For "Alnonte":** Introduce your web application as the solution to the problem:

  o "Alnonte is a web-based application designed to revolutionize the way students share and access notes. The platform allows students to display their notes, and buy or sell them through a subscription-based model, ensuring a fair and efficient marketplace for educational resources."

4. Highlight the Unique Features:

- **Example from the Original:** Mentioned specific techniques like Eye Aspect Ratio (EAR) and Euclidean distance.

- **For "Alnonte":** Emphasize what makes your platform unique, such as the subscription model or any special features:

  o "The platform is built with a focus on user-friendly design and secure transactions. With a subscription-based model, students can gain access to a wide variety of notes while also earning by selling their own. Features like note categorization, user ratings, and real-time updates make Alnonte a one-stop solution for academic note sharing."

5. Set the Goals of Your Project:

- **Example from the Original:** The goal was to create a smart alert system to prevent drowsy driving.

- **For "Alnonte":** Clearly state the objectives of your project:

  - "The primary goal of Alnonte is to create an efficient and reliable platform where students can easily access, buy, and sell notes. By doing so, the platform aims to foster a community of knowledge sharing and help students succeed in their academic pursuits."

6. Conclude with the Impact:

- **Example from the Original:** Discussed the need for a robust alert system to prevent accidents.

- **For "Alnonte":** Wrap up with the potential impact of your project on students and the educational community:

  - "With Alnonte, we envision a world where students are no longer limited by the resources available to them. By providing a platform that supports the buying and selling of notes, we hope to enhance the learning experience and contribute to academic success for students everywhere."

Double-Check:

- Ensure that your problem statement is clear and directly related to the needs of your target audience.

- Make sure the solution you propose is feasible and addresses the problem effectively.

- Highlight what sets your project apart from existing solutions.

- Clearly define the objectives and expected impact of your project.
